RGPV (DIPLOMA WING) BHOPAL		\	OBE CURRICULUM FOR THE COURSE		FORMAT-3		Sheet No. 1/3	
Branch						Semester 4th Sem.		n Sem.
Cours Code				Course Name	REFINERY A PETROCHEM Refinery main	MICAL EN		
Course Outcome 1				aintenance techn chemical plants.	ique	Teacl Hrs		
Learning Outcome 1		To understand importance of plant maintenance in Refinery and petrochemical industry			10	10		
Contents		Maintenance - Introduction, concept of maintenance Need and Objective of plant maintenance, Functions and responsibility of maintenance department advantage and economic aspect of maintenance department, recent development in maintenance.						
	lethoo sessn		Exte	ernal theory exa	am			
Learning Outcome 2		To understand different types of maintenance used in industry.				10	10	
Contents		Types of maintenance . Online, breakdown, schedule, preventive and predictive maintenance and their advantages and disadvantages some important proforma related to maintenance.						
	ethoosessn		Exte	ernal theory exa	am			
	CO-2	2	To understand organization structure of maintenance department and identify fault in and trouble short various refinery equipments.					

	To coordinate among different departments of 1	0 10					
I coming Outcome 2		0 10					
Learning Outcome -3	the organization.						
	Organization structure of maintenance department, control						
Contents	and coordination of various related functions, planning and						
	schedule of maintenance activity, functional and types of						
	store department.						
Method of	Internal Mid Sem Test-1						
Assessment							
Tarania Outrana 4	To select suitable method to remove faults in 9	10					
Learning Outcome-4	various refinery equipments.						
	Maintenance problems and remedy associated v	vith piping					
	systems, pumps, values, heat exchangers, compressor,						
Content	distillation column, boiler, blowers, evaporators and						
	condenser.						
Method of assessment	External theory exam						
Without of assessment	-						
Course Outcome 3	To understand the concept of wear and lubrication and select						
	appropriate lubrication system in industry.						
Learning Outcome 5	To minimise problems due to wear in 0	7 05					
Learning Outcome 2	petrochemical plants.						
	Wear- Introduction, main symptoms of wear, problem	lems due to					
Content	wear, rate of wear, type and causes of wear, detection of						
	wear.						
Method of assessment	External theory exam						
	To select suitable lubricant exam used in 1	0 10					
Learning Outcome 6	industry.						
	Lubrication - introduction, purposes of	lubrication,					
Content	classification & properties of lubricants, fluid, semi solid and						
	1 1						

	solid lubricants, selection of a suitable lubricant, general					
	purpose lubricants and their applications.					
Method of assessment	External theory exam					
CO-4	To identify fire explosion and chemical hazards in refinery industry.					
Learning Outcome-7	To classify fire and understand terms related to fire in refinery industry.	08	05			
Contents	Fire- Introduction to fire, fire triangle and fire tetrahedron, reasons of catching fire, classification of fire: class A,B,C,D and E. Terms related to fire. Flash and fire point, auto ignition temperature, lower and upper flammable limit.					
Method of assessment	External theory exam					
Learning Outcome 8	To select the appropriate method to prevent fire in refinery.	08	10			
Contents	Contents Fire extinguishers - carbondioxide and soda acid type, dechemical foam type, carbon tetra chloride type, fire hydrar sprinkler system, fire and gas detection system and their takeeping.					
Method of assessment	Internal Mid Sem Test-2					
Learning Outcome 9	To understand explosion and its prevention in refinery.	07	05			
Content	Explosion - Introduction, classification of explosion, unconfined vapour cloud explosion, boiling liquid expanding vapour explosion (BLEVE) and its identification, on side and off side emergency plan. Prevention of explosion.					
Method of assessment	External theory exam.					

Content in industry. Chemical hazards - identification and causes hazards control, first aid, safety factor applied to pressure vessels and storage tanks, handling of dangerous chemical substances. Method of assessment (Term work) CO-5 To utilize the basic concept of industrial safety in refinery. Learning of Outcome 11 accidents. Safety - Introduction causes and sources of accidents, general safety rules, personal protective device, colour coding for pipe lines, factory act 1948. Method of assessment External theory exam Contents Safety organization - introduction, objective of safety organization, safety training, economic aspect of accidents, safety activities and general safety awareness. Method of assessment External theory exam External theory exam Safety organization - introduction, objective of safety organization, safety training, economic aspect of accidents, safety activities and general safety awareness. External theory exam External theory exam	Learning Outcome 10	To identify and to prevent chemical hazards,	08	10		
Content first aid, safety factor applied to pressure vessels and storage tanks, handling of dangerous chemical substances. Method of assessment (Term work) CO-5 To utilize the basic concept of industrial safety in refinery. To identify the causes of plant accidents and use appropriate technique to prevent accidents. Safety - Introduction causes and sources of accidents, general safety rules, personal protective device, colour coding for pipe lines, factory act 1948. Method of assessment External theory exam To understand the role of safety organization in refinery and petrochemical industry. Safety organization - introduction, objective of safety organization, safety committee, plant safety inspection, safety training, economic aspect of accidents, safety activities and general safety awareness.	Learning Outcome 10	in industry.				
tanks, handling of dangerous chemical substances. Internal sessional/Quiz (Term work) CO-5 To utilize the basic concept of industrial safety in refinery. To identify the causes of plant accidents and use appropriate technique to prevent accidents. Safety - Introduction causes and sources of accidents, general safety rules, personal protective device, colour coding for pipe lines, factory act 1948. Method of assessment External theory exam To understand the role of safety organization in refinery and petrochemical industry. Safety organization - introduction, objective of safety organization, safety training, economic aspect of accidents, safety activities and general safety awareness.		Chemical hazards - identification and causes hazards control				
Internal sessional/Quiz (Term work)	Content	first aid, safety factor applied to pressure vessels and storage				
CO-5 To utilize the basic concept of industrial safety in refinery. To identify the causes of plant accidents and use appropriate technique to prevent accidents. Safety - Introduction causes and sources of accidents, general safety rules, personal protective device, colour coding for pipe lines, factory act 1948. Method of assessment External theory exam To understand the role of safety organization in refinery and petrochemical industry. Safety organization - introduction, objective of safety organization, safety training, economic aspect of accidents, safety activities and general safety awareness.		tanks, handling of dangerous chemical substance	es.			
CO-5 To utilize the basic concept of industrial safety in refinery. To identify the causes of plant accidents and use appropriate technique to prevent accidents. Safety - Introduction causes and sources of accidents, general safety rules, personal protective device, colour coding for pipe lines, factory act 1948. Method of assessment External theory exam To understand the role of safety organization in refinery and petrochemical industry. Safety organization - introduction, objective of safety organization, safety training, economic aspect of accidents, safety activities and general safety awareness.	Mathad of aggaggment	Internal sessional/Quiz				
To identify the causes of plant accidents and use appropriate technique to prevent accidents. Safety - Introduction causes and sources of accidents, general safety rules, personal protective device, colour coding for pipe lines, factory act 1948.	Method of assessment	(Term work)				
Learning of Outcome use appropriate technique to prevent accidents. Safety - Introduction causes and sources of accidents, general safety rules, personal protective device, colour coding for pipe lines, factory act 1948. Method of assessment External theory exam To understand the role of safety organization in refinery and petrochemical industry. Safety organization - introduction, objective of safety organization, safety committee, plant safety inspection, safety training, economic aspect of accidents, safety activities and general safety awareness.	CO-5	To utilize the basic concept of industrial safety in refinery.				
use appropriate technique to prevent accidents. Safety - Introduction causes and sources of accidents, general safety rules, personal protective device, colour coding for pipe lines, factory act 1948. Method of assessment External theory exam To understand the role of safety organization in refinery and petrochemical industry. Safety organization - introduction, objective of safety organization, safety committee, plant safety inspection, safety training, economic aspect of accidents, safety activities and general safety awareness.	I coming of Outcome	To identify the causes of plant accidents and	10	5		
Content Safety - Introduction causes and sources of accidents, general safety rules, personal protective device, colour coding for pipe lines, factory act 1948. Method of assessment External theory exam To understand the role of safety organization 10 10 in refinery and petrochemical industry. Safety organization - introduction, objective of safety organization, safety committee, plant safety inspection, safety training, economic aspect of accidents, safety activities and general safety awareness.	_	use appropriate technique to prevent				
Content safety rules, personal protective device, colour coding for pipe lines, factory act 1948. Method of assessment External theory exam To understand the role of safety organization in refinery and petrochemical industry. Safety organization - introduction, objective of safety organization, safety committee, plant safety inspection, safety training, economic aspect of accidents, safety activities and general safety awareness.	11	accidents.				
pipe lines, factory act 1948. Method of assessment External theory exam To understand the role of safety organization 10 10 in refinery and petrochemical industry. Safety organization - introduction, objective of safety organization, safety committee, plant safety inspection, safety training, economic aspect of accidents, safety activities and general safety awareness.		Safety - Introduction causes and sources of acc	idents,	general		
Method of assessment External theory exam To understand the role of safety organization in refinery and petrochemical industry. Safety organization - introduction, objective of safety organization, safety committee, plant safety inspection, safety training, economic aspect of accidents, safety activities and general safety awareness.	Content	safety rules, personal protective device, colour coding for				
Learning Outcome 12 To understand the role of safety organization 10 10 in refinery and petrochemical industry. Safety organization - introduction, objective of safety organization, safety committee, plant safety inspection, safety training, economic aspect of accidents, safety activities and general safety awareness.		pipe lines, factory act 1948.				
Learning Outcome 12 in refinery and petrochemical industry. Safety organization - introduction, objective of safety organization, safety committee, plant safety inspection, safety training, economic aspect of accidents, safety activities and general safety awareness.	Method of assessment	External theory exam				
Contents Safety organization - introduction, objective of safety organization, safety committee, plant safety inspection, safety training, economic aspect of accidents, safety activities and general safety awareness.	Learning Outcome 12	To understand the role of safety organization	10	10		
Contents organization, safety committee, plant safety inspection, safety training, economic aspect of accidents, safety activities and general safety awareness.	Learning Outcome 12	in refinery and petrochemical industry.				
training, economic aspect of accidents, safety activities and general safety awareness.		Safety organization - introduction, objects	ive of	safety		
training, economic aspect of accidents, safety activities and general safety awareness.	Contonts	organization, safety committee, plant safety inspection, safety				
T 11	Contents	training, economic aspect of accidents, safety activities and				
Method of assessment External theory exam		general safety awareness.				
	Method of assessment	External theory exam
