DIPLOMA WING
RAJIV GANDHI PROUDYOGIKI VISHWAVIDYALAYA, BHOPAL
DIPLOMA IN OPTO ELECTRONICS ENGINEERING (O01)

SEMESTER V

COURSE TITLE	:	OPTICAL FIBRE WAVEGUIDE
PAPER CODE	:	7476
SUBJECT CODE	:	501
THEORY CREDITS	:	04
PRACTICAL CREDITS	:	02

Course Objectives:

Transmission of electrical energy through metallic conductors is full of losses and signal deteriorated due to atmospheric interference.

Optical fibers are proving themselves are better replacement of metallic cables because of non atmospheric interference and low transmission losses with this advent, large number of channels are possible to be sent through a thin non metallic fiber.

This subject has been prescribed in the curriculum so that student should understand the constructional features, working of the optical fibers to understand propagation of light signal through it and specification parameters determining state of art applications specially high speed telecommunication.

Course Contents:

Unit I:Fundamentals

Physical Description of Optical Fiber: Fiber construction: material, dimensions, refractive index profile, General Experimental Consideration: Handling of fiber and fiber end preparation, Cleaver operation, Fiber striper launching of light into fiber, coupling from fiber to detector. Fiber as an optical waveguide: Guiding of light into fiber, total internal reflection, acceptance angle and numerical aperture.

Unit II: Fiber parameters

Attenuation: Reasons of attenuation, minimum attenuation wavelength.

Dispersion: Modal dispersion, material dispersion and waveguide dispersion, minimum dispersion wavelength, bandwidth and dispersion relation, Length dependence of the dispersion, length-bandwidth product

Unit III: Types of Optical Fibers

Material based types for optical fiber: Glass fiber, Plastic fiber, Plastic Cladded Silica (PCS).

Types of a fiber for communication: MMF, SMF and GIF

Dispersion shifted fibers, Dispersion flattened fiber, Polarisation maintaining fiber, Photonic Crystal Fiber (PCF).

Applications of various Optical Fibers: Optical fiber communication, Sensors, Medical Application.

Unit IV: Manufacturing of optical Fibers

Fiber manufacturing material: Criteria for selecting material, Define Perform, Perform manufacturing method: basics of Modified Chemical Vapour Deposition (MCVD) Method.

Fiber material: Criteria for selecting material.

Unit V: Optical Fiber Cables and Their Structures

Cabling basics, Overview of ITU-T Standards, Reasons for cabling, Causes of cable failure

Types of strengthening and protection needed, Cable design: Mechanical, Optical and Physical consideration, Central membrane, Buffer tube: Tight buffer, Loose tube Stranding Strengthening member: PVC, Kevlar, Stainless steel Sheath Armoring Structure,

Features performance and applications of: Single fiber cable (patch cord), Aerial Optical fiber cable, Duct cable, Direct burial cable, Under sea optical cable, Ribbon tape optical cable,

List general specifications of Optical Fiber and Cable: Optical specifications Mechanical Specifications Physical and Constructional specifications.

Reference Books/Web Portals

S.N.	Title	Author/Publisher
1	Optical Fiber Communication	By John M Senior
2	Optical Fiber Communication	By Gerd Keiser
3	Introduction to Fiber Optics	By Ghatak- Thyagrajan
4	Fiber Optics	By Robert Hoss & Edward Lacy, Prentice Hall, New Jersey.
5	Understanding Fiber Optics	By Jeff Hecht (SAMS Publishing)
6	https://www.thefoa.org	

Course Outcomes:

Upon completion of this course, the student will be able to:

- Understand propagation of light in the optical fiber
- Explain various types of optical fiber
- Describe specifications of fiber and related components
- Describe state of the art fiber manufacturing process
- Demonstrate fiber cable structure and its element

****

OPTICAL FIBRE WAVEGUIDE LAB

S.N.	Experiment
1.	General Experimental Consideration - Handling of fiber and fiber end preparation - Cleaver Operation - Fiber striper - Launching of light into fiber - Coupling from fiber to detector
2.	Fiber propagation loss measurement
3.	Bending loss measurement.
4.	Numerical aperture measurement.
5.	R.I. Profile Measurement
6.	Observe modes of the fiber
7.	Demonstration of various fiber optic cables
8.	Cable Attenuation Measurement

****

DIPLOMA WING
RAJIV GANDHI PROUDYOGIKI VISHWAVIDYALAYA, BHOPAL
DIPLOMA IN OPTO ELECTRONICS ENGINEERING (O01)

SEMESTER V

COURSE TITLE	:	LASER APPLICATION AND SAFETY
PAPER CODE	:	7477
SUBJECT CODE	:	502
THEORY CREDITS	:	04
PRACTICAL CREDITS	:	02

Course Objectives:

LASER is one of the most important inventions of our time and adopted into our everyday speech. It is proving to be an important tool in science and technology which finds application in manufacturing industries, scientific measurements, communication and above all in the service of human being.

An Opto-Electronics technician is expected to know about LASER, its types and various applications as well as safety precautions. With this end in view the subject of LASER, application and safety has been prescribed in the curriculum.

Course Contents:

Unit I: Fundamentals

Laser fundamentals: Meaning of LASER, Review of Optical spectrum, energy, power, intensity of light, Energy levels, Population inversion.

Basic components of Laser: Active medium, Pump and Resonator, Basic Principle of Laser, Radiative processes: Absorption, Spontaneous and stimulated emission.

Pumping methods: Optical and Electrical discharge pumping.

Unit II: Laser Properties

Laser Radiation properties: Meaning and specific use of the following: Divergence, Coherence, Monochromaticity and spectral width, Intensity, Focusing of Laser beam.

Specifications of lasers: Distinguish between CW and pulsed LASER, List general Optical specifications of Laser System, General Electrical specifications of Laser System, Need of Cooling system.

Unit III: Categorization of Lasers

Classification of Laser based on active medium: Solid state Laser, Gas Laser, Liquid Laser, Semiconductor Laser.

Operation, performance characteristics and specific application of: He,Ne Laser, CO_2 Laser, Nd: YAG Laser, Nd:Glass Laser, Fiber Laser

Unit IV: Modern Advanced Lasers

Operation, performance characteristics and specific application of: Nd: YAG Laser, Fiber Laser

Compare Nd:YAG Laser and Fiber Laser.

Semiconductor (Diode) Laser: Materials, Band gap and Wavelength, Structure, Basic Principle and Pumping Method, Advantages of Semiconductor Laser.

Unit V: Industrial And Medical Applications Of Lasers

Laser material processing applications:Advantages, compare with Conventional methods, Lasers choice and comparison for Material processing, Laser Cutting methods: Melt and Blow Method, Vaporization cutting, Scribing, Laser Welding, Laser engraving, Laser Surface hardening, Laser Welding, Laser engraving, Laser Surface hardening.

Medical Applications: Eye treatment, Laser surgery, Cancer treatment, Dermatology.

Hazards of Laser system: Radiation Hazards, Electrical Hazards, Chemical and Fire Hazards, Effect of Radiation on eyes and skin, Safety levels/Classes.

Reference Books/Web Portals

S.N.	Title	Author/Publisher
1	Lasers: principle and application	Wilson, Hawkes
2	LASERS	Ghatak – Thyagrajan
3	Optoelectroncs: An Introduction	Wilson, Hawkes
4	Laser, Principle, Types & Application	K.R. Nambier

Course Outcomes:

Upon completion of this course, the student will be able to:

- Understand the functioning of coherent light source
- Describe properties of Laser radiation
- Demonstrate different Laser systems
- Use high power Laser for various modern Industrial applications
- Apply safety precautions for the safe use of Lasers.

****

LASER APPLICATION AND SAFETY LAB

S.N.	Experiment
1.	Measurement of different parameters of lasers such as CW power, pulse duration, pulse energy, pulse peak power etc.
2.	Measurement of diameter
3.	Measurement of power of CO_2 Laser
4.	Demonstration of CO_2 Laser
5.	Demonstration of He,Ne Laser
6.	Measurement of Beam divergence
7.	Study of material processing such as welding, drilling, cutting, marking, surface hardening etc.
8.	Study of laser safety equipment
9.	Construction and Reconstruction of a Hologram
10.	Visit to RRCAT Indore

****

DIPLOMA WING
RAJIV GANDHI PROUDYOGIKI VISHWAVIDYALAYA, BHOPAL
DIPLOMA IN OPTO ELECTRONICS ENGINEERING (O01)

SEMESTER V

COURSE TITLE	:	INDUSTRIAL AUTOMATION
PAPER CODE	:	7468
SUBJECT CODE	:	511
THEORY CREDITS	:	03
PRACTICAL CREDITS	:	01

Course Content:

Unit I -Industrial automation overview and data acquisition
Architecture of Industrial Automation Systems.
Measurement Systems Characteristics
Data Acquisition Systems

Unit II -Control Generation
Introduction to Automatic Control
P-I-D Control
Feedforward Control Ratio Control
The branching operations based on conditions expression

Unit III Sequential control and PLC
Introduction to Sequence Control, PLC , RLL
PLC Hardware Environment

Unit IV Industrial control application
Hydraulic Control Systems
Pneumatic Control Systems
Energy Savings with Variable Speed Drives
Introduction To CNC Machines

DIPLOMA IN OPTO ELECTRONICS ENGINEERING (O01)

SEMESTER V

COURSE TITLE	:	CONTROL SYSTEM AND PLC
PAPER CODE	:	7469
SUBJECT CODE	:	512
THEORY CREDITS	:	03
PRACTICAL CREDITS	:	01

Course Objective:
The aim of this course is to help the student to attain the following industry identified competency through various teaching learning experiences:

- Maintain electronic automated systems in processs and manufacturing industries.

Course Contents:

Unit	Unit Outcomes (UOs) (in cognitive domain)	Topics and Sub-topics
Unit -I Basics of Control Sysem	1) Explain with sketches the working of the given type of control systems. 2) Compare the given 3) Control systems based on the given parameters. 4) Derive transfer function of the given electrical circuits. 5) Use block diagram reduction rules to determine optimize transfer function of the given system.	1. **Control system:** Basics of control system block diagram and practical examples 2. **Classification of control systems:** Open. loop and closed loop systems- block diagram, practical example and comparison, Linear and non -linear systems, Time varying and Time In-varying systems- practical example and comparison, servo system 3. **Transfer function:** Close loop and open loop system RC, LC and RLC Circuits- Differential equations and transfer functions and analysis using Laplace transform **4. Block diagram reduction technique:** Need, reduction rules,

Unit –II Time domain stability analysis	1) Compare the parameter of given standard test inputs. 2) Identify poles, zeros, type and order for the given transfer function 3) Sketch pole zero plot for The given transfer function. 4) Determine output of the given order system for the step input. 5) Calculate time response specifications of the given transfer function. 6) Calculate error constants of the given type of control	1. **Time Response:** Transient and steady state response. 2. **Standard test inputs:** Step, ramp, parabolic, impulse and their corresponding Laplace transform **3. Analysis of first and second order control system:** i. **Poles and zeros -** S-plane representation, Order of system (0, 1, 2)- standard equations, examples and numerical problems ii. **First order System-**Analysis for unit step input, concept of time constant. iii. **Second order system-** Analysis

	system. 7) Determine stability of the given control system using Routh's stability criteria.	for unit step input (no derivation), concept, definition and effect of damping iv. **Time response specifications** (no derivations) - Tp, Ts, Tr, Td, Mp, Ess, numerical problems 4. **Steady state analysis:** Type 0, 1, 2 systems steady state error and error constants, numerical problems 5. **Stability:** Concept of stability, root locations in S-plane and analysis- stable system, unstable system, critically stable systems, conditionally stable system, relative stability 6. **Routh's stability criterion:** Steps and procedures to find stability by Routh' s stability criteria,
Unit-III Process controllers	1) Explain with sketch the given process control system. 2) Describe with sketch the given control action. 3) Compare different. electronic controllers on the basis of the given parameters. 4) Sketch the response of the given controller with respect to error.	1. **Process Control System:** Block diagram, functions of each block **2. Control actions:** 2.1. **Discontinuous mode**- ON-OFF controllers- equation, neutral zone 2.2. **Continuous modes:** Proportional Controller - offset, proportional band. Propo11ional, Integral and Derivative controllers -o/p equation, response, characteristics, 3. **Composite controllers:** PI, PD, PID controllers- o/p equation, response
Unit-IV Fundamentals of PLC	1) Explain with sketch PLC based automation system. 2) Describe with sketch the given PLC module. 3) Identify different devices interfaced with PLC. 4) Explain the steps for PLC installation.	1. **PLC**-Block diagram, classification, (fixed and modular PLCs), need and benefits of PLC in automation 2. **Description of different parts of PLC:** CPU-function, scanning cycle, speed of execution, Power supply- block diagram and function of each block Memory - function and organization of ROM and RAM Input and output modules- function, different input and output devices of PLC (only name and their uses). **3. PLC Installation**
Unit-V PLC hardware and programming	1) Identify and describe the given module of PLC. 2) Describe the given addressing of PLC. 3) Use instruction set to perform the given operation. 4) Develop ladder logic	1. **Discrete input modules:** Block diagram, specifications of AC input modules and DC input module. Sinking and sourcing concept in DC input modules 2. **Discrete output modules:** Block diagram, description, specifications of AC output module and DC output

	programs for the given application.	modules. **3. Analog input and output modules:** Block diagram, specifications 4. **I/O addressing of PLC:** Addressing data files, format addressing of logical address, different addressing types 5. **PLC Instruction set:** Relay instructions, timer and counter instruction s, data movement instructions, logical and comparison instructions 6. **PLC Programs:** using Ladder programming language.

CONTROL SYSTEM AND PLC LAB

Course Objective:
The aim of this course is to help the student to attain the following industry identified competency through various teaching learning experiences:

- Maintain electronic automated systems in processs and manufacturing industries.

SUGGESTED PRACTICALS/ EXERCISES

1. Use potentiometer as error detector.
2. Determine error of angular position of DC servo system.
3. Test the Step response of R-C (first order) circuit.
4. Test the Step response of R-L-C (second order) circuit.
5. Test the functionality of temperature control with on-off controller.
6. Use PI controller to control temperature of the given process.
7. Use PD controller to control temperature of the given process.
8. Use PID controller to control temperature of the given process.
9. Identify and test different parts of PLC.
10. Develop ladder diagram to test the functionality of the logic gates.
11. Develop ladder diagram to test Demorgan's theorem.
12. Develop the ladder diagram for Adder and Subtractor by using PLC.
13. Develop ladder diagram for ON and OFF control of lamp using timer and counter.
14. Develop ladder diagram for traffic light Control system.
15. Develop ladder diagram for stepper motor control.
16. Develop ladder diagram for temperature controller.

SEMESTER V

COURSE TITLE	:	MICROWAVE AND RADAR
PAPER CODE	:	7470
SUBJECT CODE	:	521
THEORY CREDITS	:	03
PRACTICAL CREDITS	:	00

Course Content:

Unit I - Introduction to Microwaves

History and applications of Microwaves

Mathematical Model of Microwave Transmission-Microwave transmission modes, wave- guides and transmission lines, Impedance Matching

Microwave Network Analysis

Unit II - Passive and Active Microwave Devices

Directional Coupler, Power Divider, Attenuator, Resonator.

Microwave active components: Diodes, Transistors, Microwave Tubes

Unit III -Microwave Design Principles- Microwave Filter Design, Microwave Amplifier Design, Microwave Mixer Design, Microwave Oscillator Design. Microwave Antennas

Unit IV - Microwave Measurements, Microwave Systems, Effect of Microwaves on human body.

DIPLOMA IN OPTO ELECTRONICS ENGINEERING (O01)

SEMESTER V

COURSE TITLE	:	SEMICONDUCTOR PACKAGING AND TESTING
PAPER CODE	:	7471
SUBJECT CODE	:	522
THEORY CREDITS	:	03
PRACTICAL CREDITS	:	00

Course Objective:

The course deals with electronics systems packaging – a multidisciplinary area. The course will discuss all the vital features of Electronic packaging at three major levels, namely, chip level, board level and system level. This course covers the technology advancements of microelectronic packaging from design to fabrication; assembly and testing and discuss the Current trends in packaging of electronic systems.

Detailed Content:

Unit-1: Overview of Electronic Systems Packaging

Functions of Electronic Packaging, Packaging Hierarchy, IC packaging: MEMS packaging, consumer electronics packaging, medical electronics packaging, Trends and Challenges, Driving Forces on Packaging Technology, Materials for Microelectronic packaging, Packaging Material Properties, Ceramics, Polymers, and Metals in Packaging, Material for high density interconnect substrates

Unit -2: Electrical Issues in Packaging

Electrical Issues of Systems Packaging, Signal Distribution, Power Distribution, Electromagnetic Interference, Transmission Lines, Clock Distribution, Noise Sources, Digital and RF Issues. Design Process Electrical Design: Interconnect Capacitance, Resistance and Inductance fundamentals; Packaging roadmaps - Hybrid circuits - Resistive, Capacitive and Inductive parasitics.

Unit -3: Chip Level Packaging

IC Assembly - Purpose, Requirements, Technologies, Wire bonding, Tape Automated Bonding, Flip Chip, Wafer Level Packaging, reliability, wafer level burn – in and test. Single chip packaging: functions, types, materials processes, properties, characteristics, trends. Multi chip packaging: types, design, comparison, trends. System – in - package (SIP); Passives: discrete, integrated, and embedded.

Unit -4: PCB, Surface Mount Technology and Thermal Considerations

Printed Circuit Board: Anatomy, CAD tools for PCB design, Standard fabrication, Micro via Boards. Board Assembly: Surface Mount Technology, Through Hole Technology, Process Control and Design challenges. Thermal Management, Heat transfer fundamentals, Thermal conductivity and resistance, Conduction, convection and radiation – Cooling requirements

Unit -5: Testing

Reliability, Basic concepts, Environmental interactions. Thermal mismatch and fatigue – failures – thermo mechanically induced –electrically induced – chemically induced. Electrical Testing: System level electrical testing, Interconnection tests, Active Circuit Testing, Design for Testability.

9. M. Abramovici, M. A. Breuer, and A.D. Friedman, "Digital System Testing and Testable Design", Computer Science Press,1990

Course Outcomes:

At the end of the course learners will be able to

1. Discuss the various packaging types
2. Design of packages which can withstand higher temperature, vibrations and shock
3. Design of PCBs which minimize the EMI and operate at higher frequency
4. Analyze the concepts of testing methods.
5. Discuss the various packaging types

SEMESTER V

COURSE TITLE	:	RENEWABLE ENERGY TECHNOLOGIES
PAPER CODE	:	7601
SUBJECT CODE	:	531
THEORY CREDITS	:	03
PRACTICAL CREDITS	:	00

Course Learning Objectives:

- To understand present and future scenario of world energy use.
- To understand fundamentals of solar energy systems.
- To understand basics of wind energy.
    - To understand bio energy and its usage in different ways.
    - To identify different available non-conventional energy sources.

Course Content:

UNIT-I: Introduction: World Energy Use; Reserves of Energy Resources; Environmental Aspects of Energy Utilisation; Renewable Energy Scenario in India and around the World; Potentials; Achieve-ments / Applications; Economics of renewable energy systems.

Unit-II: Solar energy: Solar Radiation; Measurements of Solar Radiation; Flat Plate and Concentrat- ing Collectors; Solar direct Thermal Applications; Solar thermal Power Generation Fundamentals ofSolar Photo Voltaic Conversion; Solar Cells; Solar PV Power Generation; Solar PV Applications.

Unit-III: Wind Energy: Wind Data and Energy Estimation; Types of Wind Energy Systems; Perfor- mance; Site Selection; Details of Wind Turbine Generator; Safety and Environmental Aspects.

Unit-IV: Bio-Energy: Biomass direct combustion; Biomass gasifiers; Biogas plants; Digesters; Etha-nol production; Bio diesel; Cogeneration; Biomass Applications.

Unit-V: Other Renewable Energy Sources: Tidal energy; Wave Energy; Open and Closed OTEC Cy- cles; Small Hydro-Geothermal Energy; Hydrogen and Storage; Fuel Cell Systems; Hybrid Systems.

8. Renewable Energy Resources, JW Twidell and AD Weir, ELBS, 2006.

Course outcomes:

At the end of the course, the student will be able to:

CO1	Understand present and future energy scenario of the world.
CO2	Understand various methods of solar energy harvesting.
CO3	Identify various wind energy systems.
CO4	Evaluate appropriate methods for Bio energy generations from various Bio wastes.
CO5	Identify suitable energy sources for a location.

DIPLOMA WING
RAJIV GANDHI PROUDYOGIKI VISHWAVIDYALAYA, BHOPAL
DIPLOMA IN OPTO ELECTRONICS ENGINEERING (O01)

SEMESTER V

COURSE TITLE	:	INTERNET OF THINGS
PAPER CODE	:	7602
SUBJECT CODE	:	532
THEORY CREDITS	:	03
PRACTICAL CREDITS	:	00

Course Content:

Unit I - Introduction to Internet of Things

- Define the term "Internet of Things"
- State the technological trends which have led to IoT.
- Describe the impact of IoT on society.

Unit II - Design consideration of IoT

- Enumerate and describe the components of an embedded system.
- Describe the interactions of embedded systems with the physical world.
- Name the core hardware components most commonly used in IoT devices.

Unit III Interfacing by IoT devices

- Describe the interaction between software and hardware in an IoT device.
- Explain the use of networking and basic networking hardware.
- Describe the structure of the Internet.

SUGGESTED LEARNING RESOURCES:

S. No.	Title of Book	Author	Publication
1	Internet of Things	Raj Kamal	McGraw Hill Education; First edition (10 March 2017) ISBN 978-9352605224
2	internet of Things: A Hands-On Approach	Arsheep Bahge and Vijay Madisetti	Orient Blackswan Private Limited - New Delhi; First edition (2015) ISBN : 978-8173719547

SUGGESTED SOFTWARE/LEARNING WEBSITES:

1. https://www.raspberrypi.org/blog/getting-started-with-iot/
2. https://www.arduino.cc/en/IoT/HomePage
3. https://www.microchip.com/design-centers/internet-of-things
4. https://learn.adafruit.com/category/internet-of-things-iot
5. http://esp32.net/

DIPLOMA IN OPTO ELECTRONICS ENGINEERING (O01)

SEMESTER V

COURSE TITLE	:	SUMMER INTERNSHIP - II
PAPER CODE	:	--
SUBJECT CODE	:	--
THEORY CREDITS	:	00
PRACTICAL CREDITS	:	03

SUMMER INTERNSHIP - II

4-6 weeks summer internship after IVth Semester.

It should be undertaken in an Industry only.

Evaluation is based on work done, quality of report, performance in viva-voce, presentation etc.

****

DIPLOMA WING
RAJIV GANDHI PROUDYOGIKI VISHWAVIDYALAYA, BHOPAL
DIPLOMA IN OPTO ELECTRONICS ENGINEERING (O01)

SEMESTER V

COURSE TITLE	:	MAJOR PROJECT
PAPER CODE	:	--
SUBJECT CODE	:	--
THEORY CREDITS	:	00
PRACTICAL CREDITS	:	00 (ONE CREDIT WILL BE CARRIED FORWARD TO THE VI SEM. MAJOR PROJECT EVALUATION)

MAJOR PROJECT

It should be based on real/live problems of the Industry/Govt./NGO/MSME/Rural Sector or an innovative idea having the potential of a Startup.

Evaluation is based on work done, quality of report, performance in viva-voce, presentation etc.
